The 2015 Navigation Book has been designed to promote safe navigation for both deep-draft and shallow-draft vessels up and down the Lower Mississippi River, Gulf of Mexico to Cairo, IL.

The U. S. Army Corps of Engineers encourages book users to submit corrections, additions, or comments for improving this chart to the Geospatial Coordinator, Mississippi Valley Division, 1400 Walnut St., Vicksburg, MS 39181.

## Mississippi River

### Cairo, Illinois to the Gulf of Mexico

### Mile 953 A.H.P. to Mile 22 B.H.P.

63<sup>rd</sup> Edition

Louisiana, Mississippi, Arkansas, Missouri,  
Tennessee, Kentucky, Illinois

#### Lower Mississippi River

Gulf of Mexico to Cairo, IL  
Mississippi River, Southwest Pass, South Pass,  
Baptist Collette, Tiger Pass,  
Inner Harbor Navigation Canal, Industrial Canal  
Algiers Canal, Harvey Canal, Baton Rouge Harbor,  
Greenville, MS, Vicksburg, MS,  
Memphis, TN, Cairo IL

#### HORIZONTAL DATUM

The horizontal reference datum of this chart is North American Datum of 1983 (NAD 83) which for charting purposes is considered equivalent to the World Geodetic System 1984 (WGS 84).

Users may plot positions obtained from satellite navigation systems such as the Global Positioning System (GPS) coordinates directly on these chart pages.

North American Datum 1983 graticule is indicated by lines, labeled with degree, minute, second, and hemisphere.

#### CHARTING DATUMS

Mean Lower Low Water (MLLW) used below Mississippi River, Head of Passes, LA. The Low Water Reference Plane (LWRP) is used for the Lower Mississippi River, Head of Passes upstream.

The LWRP for all charts has been adjusted to be referenced to the North American Vertical Datum of 1988 (NAVD 88).

#### NOTES

The drying height represented below river mile 173 was compiled from stereo aerial photography flown between May and June 2011.

This Navigation Chart Book has been corrected through the Local Notice to Mariners published weekly by the U. S. Coast Guard, as of the LNM-39-06.

#### River Mileages on the Mississippi River

The represented river mileage positions were computed as statute mile along the 1962 river thalweg. These river mile positions were set and remain in use today. Therefore these mile markers do not exactly correspond to the current thalweg distances nor to navigational distances as traveled by the mariner; instead, their map positions are to be considered as landmarks and points used for reference purposes.

Of note, prior to 1935, the Mississippi River mileage was measured from a zero at Cairo, Illinois. It is also mile 0.0 for the Upper Mississippi River. At that time the river mileage at New Orleans' Foot of Canal Street was approximately 975 miles. On today's maps, Cairo is 953.8 miles AHP, due to cutoffs made in the 1930s and ongoing river engineering efforts.

From 1935 to 1943, the river mileage was established as Mile 0.0 from the mouth of Southwest Pass. By 1944, the river mileage was determined to be 0.0 from the Mississippi River Head of Passes and it remains in effect today. This adjustment began use of the term "Above Head of Passes" or AHP for referencing current river miles.

#### WARNING

The represented survey information is accurate as of the date of publication or referenced date of source data. Hydrographic survey data is subject to change rapidly due to several factors including but not limited to dredging activity and natural shoaling and scouring processes. The U. S. Army Corps of Engineers accepts no responsibility for changes in the hydrographic conditions which develop after the date of publication.

#### CAUTIONS

Mariners are warned that logs and other floating debris are constant dangers to navigation.

Small craft operators are warned beware of severe water turbulence caused by large vessels traversing narrow channels and are recommended against night travel due to floating obstruction hazards.

Additional uncharted submarine pipelines and submarine cables may exist within the charted areas.

Not all submarine cables and pipelines are required to be buried, and those that were originally buried may have become exposed. Mariners should use extreme caution when operating vessels in depths of water comparable to their drafts in areas where pipelines and cables may exist, and when anchoring, dredging or trawling.

#### MISSISSIPPI RIVER LIGHTS

The numbers in parenthesis at the aids to navigation and facilities are distances in river miles above/below Head of Passes, example: Devil's Swamp (242.4)

#### MISSISSIPPI RIVER BUOYS

Buoys on the Mississippi River maintained by the U. S. Coast Guard are not shown in this Navigation Book with the exception of bridge approach buoys, Lighted Wreck Buoy "WR4", Mile 115.4, Lighted Wreck Buoy "WR1", Mile 125.0, Medora Crossing Buoy "2", Mile 211.5, Missouri Bend Buoys, "2", "4", "6", "8", "10", "12" Mile 222 and Red Eye Crossing Buoy."2", Mile 223.5.

Buoy locations shown represent approximate placement at a Low Water Reference Plane river stage.

Due to frequently changing river stages and river currents, which often necessitate the repositioning, discontinuance and establishment of floating aids to navigation, many low water buoys maintained by the U. S. Coast Guard are not shown in this Navigation Book. Consult Local Notice to Mariners for the latest river conditions.

Consult the U. S. Coast Guard Light List and Local Notice to mariners for additional information.

#### LOCK INFORMATION

See Code of Federal Regulations, Title 33 Navigation and Navigable Waters, Chapter II – Corps of Engineers, Department of the Army for locking information:

<http://www.gpo.gov/fdsys/pkg/CFR-1999-title33-vol3/pdf/CFR-1999-title33-vol3-sec207-200.pdf>

Daily updates of locking information, closures, anticipated queue times, number of tows waiting, and special instruction may be obtained at:  
[http://www2.mvn.usace.army.mil/od/lockupdates/inc\\_statusindex.asp](http://www2.mvn.usace.army.mil/od/lockupdates/inc_statusindex.asp)

#### Lock Contacts and Information

Lock	Mile	VHF	Office Phone	After Hours	Length x Width
Algiers Lock	88.0	14	(504) 394-5714	(504) 394-7221	760' x 75'
Empire Lock	29.5	-	-	-	200' x 40'
Harvey Lock	98.3	14	(504) 366-4683	(504) 366-5187	425' x 75'
Inner Harbor Navigation Canal	92.6	14	(504) 945-2157	(504) 947-2606	640' x 75'
Ostrica Lock	25.7	-	-	-	250' x 40'
Old River Lock	304.0	14	(225) 492-3333	(225) 492-2301	1200' x 75'
Port Allen Lock	228.5	14	(225) 343-3752	(225) 344-8272	1202' x 75'
White River Lock	599	-	(501) 324-7340	(501) 324-7340	600' x 110'

**NAVIGATION NOTES**

The Prudent Mariner shall not rely solely on any single aid to navigation, particularly on floating aids. See the U.S. Coast Guard Light List for details.

Mariners should be cautioned that all aids to navigation depicted on charts comprise a system of fixed and floating aids with varying degrees of reliability.

The U. S. Coast Guard is responsible for placing and maintaining all aids to navigation. Buoys are set to mark project depths taking into consideration the prevailing river stages and obstructions, as well as the rise or fall of the predicted river conditions. Buoy positions as shown on the chart are "Position Approximate" (PA) locations.

Aids to Navigation may be carried off position by high water- accumulation of drift debris, ice or sunk by collision or other causes. When carried off position, destroyed or removed to prevent loss, buoys are replaced at the earliest opportunity by the U. S Coast Guard.

Buoys should always be left with as wide a berth as possible when passing consistent with the length and width of vessel or tow and the width of the river bend or crossing. A buoy should never be scraped, hit or run over by any vessel at any time. If this occurs the mariner is required to report it to the Coast Guard, 46 CFR 26.08-20.

**MARINE INFORMATION**

The Eighth Coast Guard District is continuously alert for circumstances, which affect safe and efficient passage of river traffic. The Aids to Navigation Office in New Orleans receives reports from mariners and government agencies and distributes information to mariners through various marine information channels.

The four primary means of passing marine information in the Eighth Coast Guard District:

1. Broadcast Notice to Mariners
2. Local Notice to Mariners
3. Channel Reports
4. Directly from Lockmaster

There are four basic marine information publications printed by either the Coast Guard or U. S. Army Corps of Engineers which should be on all vessels:

1. Corps of Engineers Navigational Charts
2. Navigation Rules, International-Inland
3. Light List, Volume V, Mississippi River System and Volume IV, Gulf of Mexico
4. Corps of Engineers Regulations (Bluebook) 33 CFR 207

**HOW TO OBTAIN LOCAL NOTICE TO MARINERS**

Local Notice to Mariners may be obtained by:

1. One-way e-mail service, via subscription through the U.S. Coast Guard Navigation Center website, Local Notice to Mariners link at: <http://www.navcen.uscg.gov>.
2. Or downloaded from the U.S. Coast Guard Navigation Center website, Local Notice to Mariners Link at: <http://www.navcen.uscg.gov>.

The U. S. Coast Guard, Eighth District offices may be contacted at:

Commander, (DPW)  
Eighth Coast Guard District  
Hale Boggs Federal Building  
500 Poydras Street  
New Orleans, LA 70130-3396  
(504) 671-2107

Mariners may contact the U. S. Coast Guard Command Center, 24-hours a day at (504) 589-6225.

In case of emergency or accident, contact the appropriate Coast Guard sector office:

1. Sector Upper Mississippi River, (866) 360-3386
2. Sector Lower Mississippi River, (866) 777-2784
3. Sector Ohio Valley, (800) 253-7465
4. Sector New Orleans, (800) 874-2153

**AIDS TO NAVIGATION**

**Aid to Navigation** - The term Aid to Navigation means any device external to a vessel intended to assist a navigator to determine position or safe course, or to warn of dangers or obstructions to navigation.

**Above Baton Rouge, LA (Mile 235.0) – Western Rivers System of Buoyage**

The Western Rivers System – a variation of the standard U.S. Aids to Navigation System is employed on the Mississippi River and its tributaries above Baton Rouge, LA and on certain rivers which flow toward the Gulf of Mexico. For more information on aids to navigation access the U.S. Coast Guard Navigation Center website.

**Below Baton Rouge (Mile 235.0) – U. S. Standard Aids to Navigation System of Buoyage**

The waters of the United States and its territories are marked to assist navigation by the U.S. Aids to Navigation System. This system encompasses buoys and beacons conforming to the International Association of Lighthouse Authorities (IALA) buoyage guidelines and other short range aids to navigation. All U. S. lateral marks are located in the IALA Region B and follow the traditional 3R rule; red, right, returning from sea. For more information on aids to navigation access the U.S. Coast Guard Navigation Center website.

**Gulf Intracoastal Waterway**

Aids to navigation marking the Intracoastal Waterway (Algiers Canal, Harvey Canal, IHNC, behind Port Allen Lock) exhibit unique yellow symbols to distinguish them from aids marking other waterways. When following the Intracoastal Waterway westward from Carrabelle, FL to Brownsville, TX, aids with yellow triangles should be kept on the starboard side of the vessel and aids with yellow squares should be kept on the port side of the vessel. A horizontal band provides no lateral information, but simply identifies aids to navigation as marking the Intracoastal Waterway.

**DGPS FREQUENCIES**

The U. S. Coast Guard Navigation Center (NAVCEN) operates the Coast Guard Maritime Differential Global Positioning System (DGPS) Service and the developing Nationwide DGPS Service, consisting of two control centers and over 60 remote broadcast sites. The Service broadcasts correction signals on marine radiobeacon frequencies to improve the accuracy of and integrity to GPS-derived positions. The Coast Guard DGPS Service provides 10-meter accuracy in all established coverage areas.

**English Turn, LA**

Site Name ENGLISH TURN, LA  
Antenna Location 29-52.7N, 89-56.5W  
Transmit Frequency (KHz) 293  
Transmit Rate (bps) 200  
Signal Strength 100uV/m at 170 NM

**BoBo, MS**

Site Name BOBO, MS  
Antenna Location 34-6.91N, 90-41.47W  
Transmit Frequency (KHz) 297  
Transmit Rate (bps) 200  
Signal Strength 100uv/m at 325km

**St. Louis, MO**

Site Name ST LOUIS, MO  
Antenna Location 38-36.7N, 89-45.5W  
Transmit Frequency (KHz) 322  
Transmit Rate (bps) 200  
Signal Strength 100uV/m at 115 SM

Additional information may be obtained from the U. S. Coast Guard Navigation Center website, <http://www.navcen.uscg.gov>.

## HYDROGRAPHIC FEATURES

**Sailing Line** - The Sailing Line shown is an approximate representation of the track a down bound vessel would follow during a low river stage equal to the Low Water Reference Plane water level.

**Low Water Reference Plane** – LWRP from Mile 320 to Mile 950 is the 2007 LWRP computer from 2007 average low water stage at discharge equaled or exceeded 97% of the time.

The Mississippi River 2007 LWRP mile 313.7 to 265.4 is based on a 97% discharge duration of 146,000 cfs at Tarbert Landing (1954-2005) and corresponding 10 year (1996-2005) mean stage of 14.8 ft.NAVD88 at Knox Landing, 13.5 ft.NAVD88 at Red River Landing, and 6.6 ft.NAVD88 at Bayou Sara.

The 2007 LWRP below river mile 265.4, from Baton Rouge to Venice is based on a 97% stage exceedence of daily lows for the period of record at each site.

**Drying Height Area** is defined as an area denoting the range between water edge and high water conditions. Drying height is denoted as dark brown in this publication. The feature applies only to that section of the river that is not controlled by a lock and dam, also known as open river.

### Color for Water Areas

A dark blue tint is shown on pages in this Navigation Book to represent areas of less than Project Depth. The light blue areas represents depths of project depth or greater.

The navigation channel will be marked with buoys as per U.S. Coast Guard.

Channel data as depicted is as of date of survey.

DISTRICT	HYDROGRAPHIC SURVEY DATES
MEMPHIS	FEBRUARY 2010
VICKSBURG	MARCH – SEPTEMBER 2013
NEW ORLEANS	JANUARY - SEPTEMBER 2013

**Mean Lower Low Water** – (MLLW) The tidal datum that is the average of the lowest low water height of each tidal day observed over the National Tidal datum Epoch, 19-years metonic cycle.

### Channel Condition Reports and Surveys

In general, this Navigation Book gives project depths for deep-draft ships, 45', up to Baton Rouge LA (Mile 232.4), 40' project depth between river miles 232.4 and 233.8, and project depth for shallow draft, 9', tows above Baton Rouge, LA. In all cases mariners are advised to consult with pilots, local, State or Federal authorities for the latest channel controlling depths. The controlling depths are shown on these charts and published in the appropriate Local Notice to Mariner. Current channel conditions for high shoal areas at passes and at Mississippi River Crossings are obtained from hydrographic surveys and posted to: <http://www.mvn.usace.army.mil/Missions/Navigation/ChannelSurveys.aspx>

### Submarine Cables and Submerged Pipelines

Submarine cables and submerged pipelines cross many of the navigable waterways used by both large and small vessels. Normally warning signs are posted on the banks where submerged cables or a pipeline exists to warn mariners of their existence; in some areas warning signs are not always present.

## CHART PAGE DESCRIPTIONS

### Bridges and Cables

Vertical Clearances for Bridges are in feet above the appropriate reference gage zero reading. To obtain actual bridge clearance the mariner must subtract the appropriate gage river stage reading from the bridge clearance given.

Vertical Clearances for Overhead cables are in feet above the appropriate river gage mean high water readings; they may be as-built (verified by actual inspection after completion of structure), laser-range surveyed or authorized (design values specified in permit issued prior to construction). No differentiation is made in this Navigation Book between as-built, re-surveyed or authorized clearances.

Vertical Clearance for drawbridges and lift bridges are for the closed position and the open position as referenced to the appropriate river or tide gage as listed.

Vessels with masts, stacks, booms or antennas should allow sufficient clearance under power cables to avoid arcing.

Horizontal clearances for all bridges are in feet, as measured from the narrowest features.

### Obstructions

Wrecks and other obstructions are mentioned only if of a relatively permanent nature and in or near normal traffic routes.

**Depth** is the vertical distance from the chart datum to the bottom and is expressed in feet. Depth contours are lines connecting points of equal depth.

**Controlling Depth** of a channel or crossing is the least depth within the limits of the channel; it restricts safe use of the channel to drafts of less than that depth.

**Federal Project Depth** is the designed dredging depth of a channel constructed by the U. S. Army Corps of Engineers; the project depth may or may not be the goal of maintenance dredging after completion of the channel and for this reason project depth must not be confused with controlling depth.

Region Covered	Begin Mile	End Mile	Project Depth
Cairo, IL to I-190 Bridge, La	960	233.8	9'
I-190 Bridge to Upper Baton Rouge Front Crossing	233.8	232.4	40'
Upper Baton Rouge Front Crossing to Head of Passes	232.4	0	45'
Head of Passes to Gulf of Mexico, (Southwest Pass)	0	22 BHP	45'

### U. S. Buoyage Systems – Aids to Navigation

Aids to navigation depicted on charts comprise a system of fixed and floating aids with varying degrees of reliability. Therefore, prudent mariners will not rely solely on any single aid to navigation, particularly a floating aid. Consult the latest Light List or the Coast Guard Navigation Center website at: <http://www.navcen.uscg.gov>.

The U. S. Coast Guard Light List Volume V, Mississippi River System and Light List Volume IV, Gulf of Mexico, should be consulted for determination between Federally Maintained Aids to Navigation and Private Aids to Navigation.

The mariner is also cautioned that buoys may be missing or off station as the result of ice, running ice or other natural causes (high water), collisions, or other accidents.

### Western Rivers System of Buoyage

The Western Rivers System is a variation of the standard U.S. Aids to Navigation System that is employed on the Mississippi River and its tributaries above Baton Rouge, LA and on certain rivers which flow toward the Gulf of Mexico. The Western Rivers System varies from standard U. S. system, as follows:

1. Aids to navigation are not numbered.
2. Numbers on aids to navigation do not have lateral significance, but rather indicate mileage from a fixed point (normally a river mouth or confluence).
3. Diamond shaped crossing dayboards, red and white or green and white as appropriate are used to indicate where the river channel crosses from one bank to another.
4. Lights on the green aids to navigation show a single-flash characteristic, which may be green or white.
5. Lights on the red aids to navigation show a group-flash characteristic, which may be red or white.
6. Isolated Danger marks are not used.

### U. S. Standard Aids to Navigation System of Buoyage

The waters of the United States and its territories are marked to assist navigation by the U.S. Aids to Navigation System. This system encompasses buoys and beacons conforming to the International Association of Lighthouse Authorities (IALA) buoyage guidelines and other short range aids to navigation. All U. S. lateral marks are located in the IALA Region B (IALA B) and follow the traditional 3R rule; Red, Right Returning from sea. For more information on aids to navigation access the U.S. Coast Guard Navigation Center website at: <http://www.navcen.uscg.gov>

**COMMUNICATIONS**

Normal Lower Mississippi River VHF communication channels:

Channel Number	Usage
16	International Distress, Safety and Calling Channel. Ships required to carry radio, the USCG, and most coast stations maintain a listening watch on this channel.
22A	USCG Liaison and Maritime Safety Information Broadcasts. Broadcasts are announced on channel 16.
14	Most locks monitor and work this channel.
13	Devil's Swamp Light, Mile 242.4, AHP and above.
67	Devil's Swamp Light, Mile 242.4, AHP to the Gulf of Mexico.

Both channels 13 and 67 should be monitored by vessels transiting in this locality to ensure being altered to all traffic movements in the area.

**Maritime Safety Information Broadcasts**

The U.S. Coast Guard and other government agencies broadcast different kinds of maritime safety warnings, using a variety of different radio systems to ensure coverage of different ocean areas for which the United States has responsibility, and ensure all ships of every size and nationality can receive this safety information. All broadcasts except those over VHF and MF radiotelephone are made by computer.

**Coastal Maritime Safety Broadcasts**

VHF Marine Radio Broadcasts. Urgent marine navigational and weather information is broadcast over VHF channel 22A (157.1 MHZ) from over 200 sites covering the coastal areas of the U.S., including the Great Lakes, major inland waterways, Puerto Rico, Alaska, Hawaii and Guam. Broadcasts are first announced over the distress, safety and calling channel 16 before they are made. All ships in U.S. waters over 20m in length are required to monitor VHF channel 16, and must have radios capable of tuning to the VHF simplex channel 22A.

**U. S. Coast Guard National Distress System**

National Distress System VHF site consists of a receiver guarding VHF Channel 16, the maritime distress, safety and calling channel, and a transceiver capable of operating on one of six fixed maritime channels. Two of these channels are always Channel 16 and 22A.

**Vessel Traffic Services**

The purpose of a Vessel Traffic Service (VTS) is to provide active monitoring and navigational advice for vessels in particularly confined and busy waterways. All Vessels transiting the Lower Mississippi River, New Orleans Harbor area, Mile 103 AHP to Mile 88 AHP are required to contact New Orleans Vessel Traffic Service on VHF Channel 67 at the following locations:

**Contact Governor Nicholls Light (VHF Ch 67):**

- All Northbound Traffic at Chalmette Ferry Crossing, Mile 88.6 AHP.
- All Northbound Traffic at the Industrial Forebay, Mile 92.8 AHP.
- All traffic exiting the Inner Harbor Navigational Locks, before entering the Mississippi River.

**Contact Gretna Light (VHF Ch. 67):**

- All South Bound Traffic at Cargill Westwego Grain Elevator, Mile 103.0 AHP.
- All South Bound Traffic at Marlex Docks, The Navy Ships, Mile 99.1, AHP.

All other traffic departing docks within Mile 103 to Mile 88 area, contact the appropriate Traffic Light to request vessel movements.

**NOAA Weather Radio Frequencies**

Channel	Frequency (MHz)
WX1	162.550
WX2	162.400
WX3	162.475
WX4	162.425
WX5	162.450
WX6	162.500
WX7	162.525

**U. S. Marine VHF Channels**

Channel Number	Ship Transmit MHz	Ship Receive MHz	Usage
01A	156.050	156.050	Port Operations and Commercial, VTS. Available only in New Orleans / Lower Mississippi area.
05A	156.250	156.250	Port Operations or VTS in the Houston, New Orleans and Seattle areas.
06	156.300	156.300	Internship Safety
07A	156.350	156.350	Commercial
08	156.400	156.400	Commercial (Internship only)
09	156.450	156.450	Boater Calling. Commercial and Non-Commercial.
10	156.500	156.500	Commercial
11	156.550	156.550	Commercial. VTS in selected areas.
12	156.600	156.600	Port Operations. VTS in selected areas.
13	156.650	156.650	Internship Navigation Safety (Bridge-to-bridge). Ships >20m length maintain a listening watch on this channel in US waters.
14	156.700	156.700	Port Operations. VTS in selected areas.
15	--	156.750	Environmental (Receive only). Used by Class C EPIRBs.
16	156.800	156.800	International Distress, Safety and Calling. Ships required to carry radio, USCG, and most coast stations maintain a listening watch on this channel.
17	156.850	156.850	State Control
18A	156.900	156.900	Commercial
19A	156.950	156.950	Commercial
20	157.000	161.600	Port Operations (duplex)
20A	157.000	157.000	Port Operations
21A	157.050	157.050	U.S. Coast Guard only
22A	157.100	157.100	Coast Guard Liaison and Maritime Safety Information Broadcasts. Broadcasts announced on channel 16.
23A	157.150	157.150	U.S. Coast Guard only
24	157.200	161.800	Public Correspondence (Marine Operator)
25	157.250	161.850	Public Correspondence (Marine Operator)
26	157.300	161.900	Public Correspondence (Marine Operator)
27	157.350	161.950	Public Correspondence (Marine Operator)
28	157.400	162.000	Public Correspondence (Marine Operator)
63A	156.175	156.175	Port Operations and Commercial, VTS. Available only in New Orleans / Lower Mississippi area.
65A	156.275	156.275	Port Operations
66A	156.325	156.325	Port Operations
67	156.375	156.375	Commercial. Used for Bridge-to-bridge communications in lower Mississippi River. Internship only.
68	156.425	156.425	Non-Commercial
69	156.475	156.475	Non-Commercial
70	156.525	156.525	Digital Selective Calling (voice communications not allowed)
71	156.575	156.575	Non-Commercial
72	156.625	156.625	Non-Commercial (Internship only)
73	156.675	156.675	Port Operations
74	156.725	156.725	Port Operations
77	156.875	156.875	Port Operations (Internship only)
78A	156.925	156.925	Non-Commercial
79A	156.975	156.975	Commercial. Non-Commercial in Great Lakes only
80A	157.025	157.025	Commercial. Non-Commercial in Great Lakes only
81A	157.075	157.075	U.S. Government only - Environmental protection operations.
82A	157.125	157.125	U.S. Government only
83A	157.175	157.175	U.S. Coast Guard only

AIS 2	162.025	162.025	Automatic Identification System (AIS)
88A	157.425	157.425	Commercial, Internship only.

**ADDITIONAL U. S. ARMY CORPS OF ENGINEERS  
NAVIGATIONAL PRODUCTS****Inland Electronic Navigational Charts (IENCs)**

The U.S. Army Corps of Engineers produces Inland Electronic Navigational Charts (IENCs) for the Lower Mississippi River, Mile 236 upwards throughout the Inland Waterway System.

These IENCs are created for use in Electronic Chart Systems (ECS) to position a vessel upon the electronic navigational chart display. Use of ECS in conjunction with IENCs does not eliminate the USCG paper chart carriage requirement. Until such guidance and policy is established, IENCs provide a valuable adjunct to the 2015 Navigation Book.

IENCs offer significant benefits to vessels including accurate and real-time display of vessel position relative to waterway features, voyage planning and monitoring tools, Automatic Identification Systems (AIS) integration, and training tools for new personnel and integrated display of river charts, radar, and AIS.

All Mississippi River IENCs are maintained with updates of new or corrected Local Notice to Mariner information as it becomes available. IENCs are updated at least annually and monthly maintenance is currently underway.

The U. S. Army Corps of Engineers has and can develop large-scale specialized IENCs to respond to unique or short-term navigational requirements within the Inland Waterways System.

IENC chart products, services, and information are available for download at: <http://www.agc.army.mil/Missions/Echarts>

**Other Electronic Navigational Charts**

The National Oceanic & Atmospheric Administration's (NOAA) Office of Coast Survey produces Electronic Navigational Charts (ENC) for the Mississippi River, Mile 236 to the Gulf of Mexico and associated side channels. NOAA ENCs are available the Navigation Chart site at:

<http://www.nauticalcharts.noaa.gov/mcd/enc/index.htm>

**WATERBORNE COMMERCE STATISTICS CENTER**

The U. S. Army Corps of Engineers, Waterborne Commerce Statistics Center under the authority of the Rivers & Harbors Act of 1922, collects, processes, distributes, and archives vessel trip and cargo data.

Under Federal law, vessel operating companies must report domestic waterborne commercial movements to the Corps.

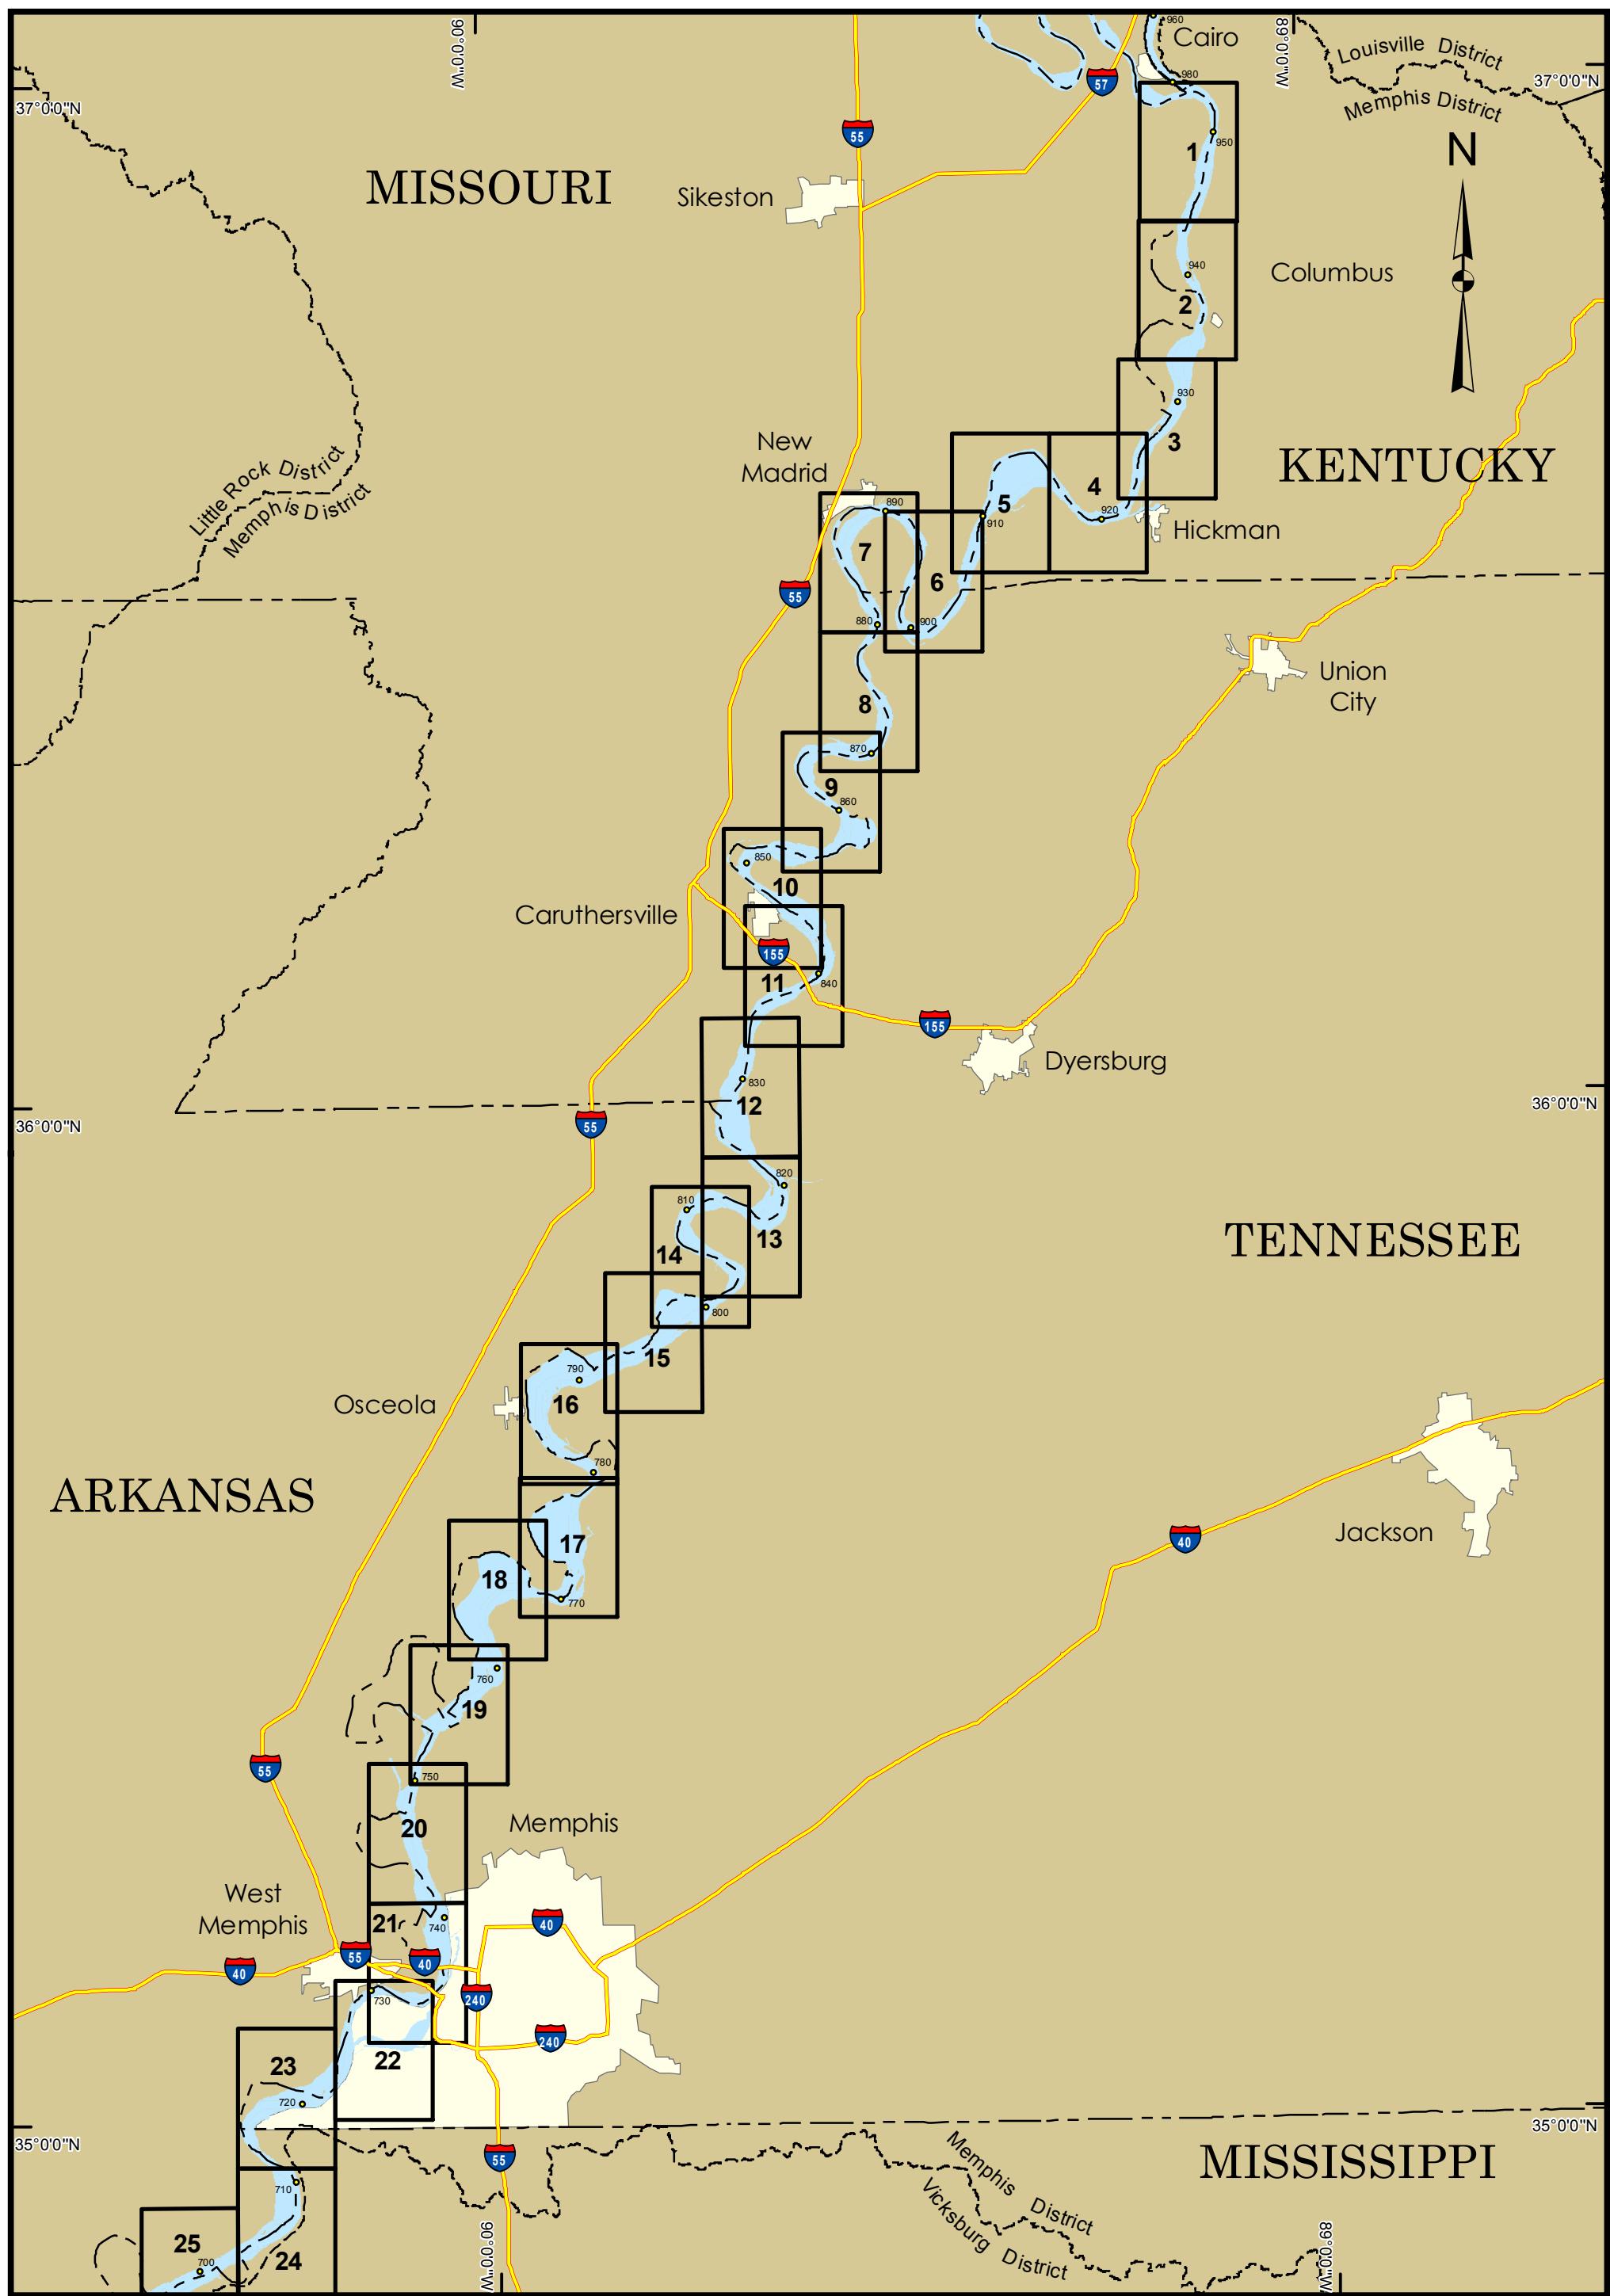

Data summaries include origin to destination information of foreign and domestic waterborne cargo movements by region and state, and also waterborne tonnage for principal ports and state and territories. Internal waterway tonnage indicators are updated monthly on the NDC web site.

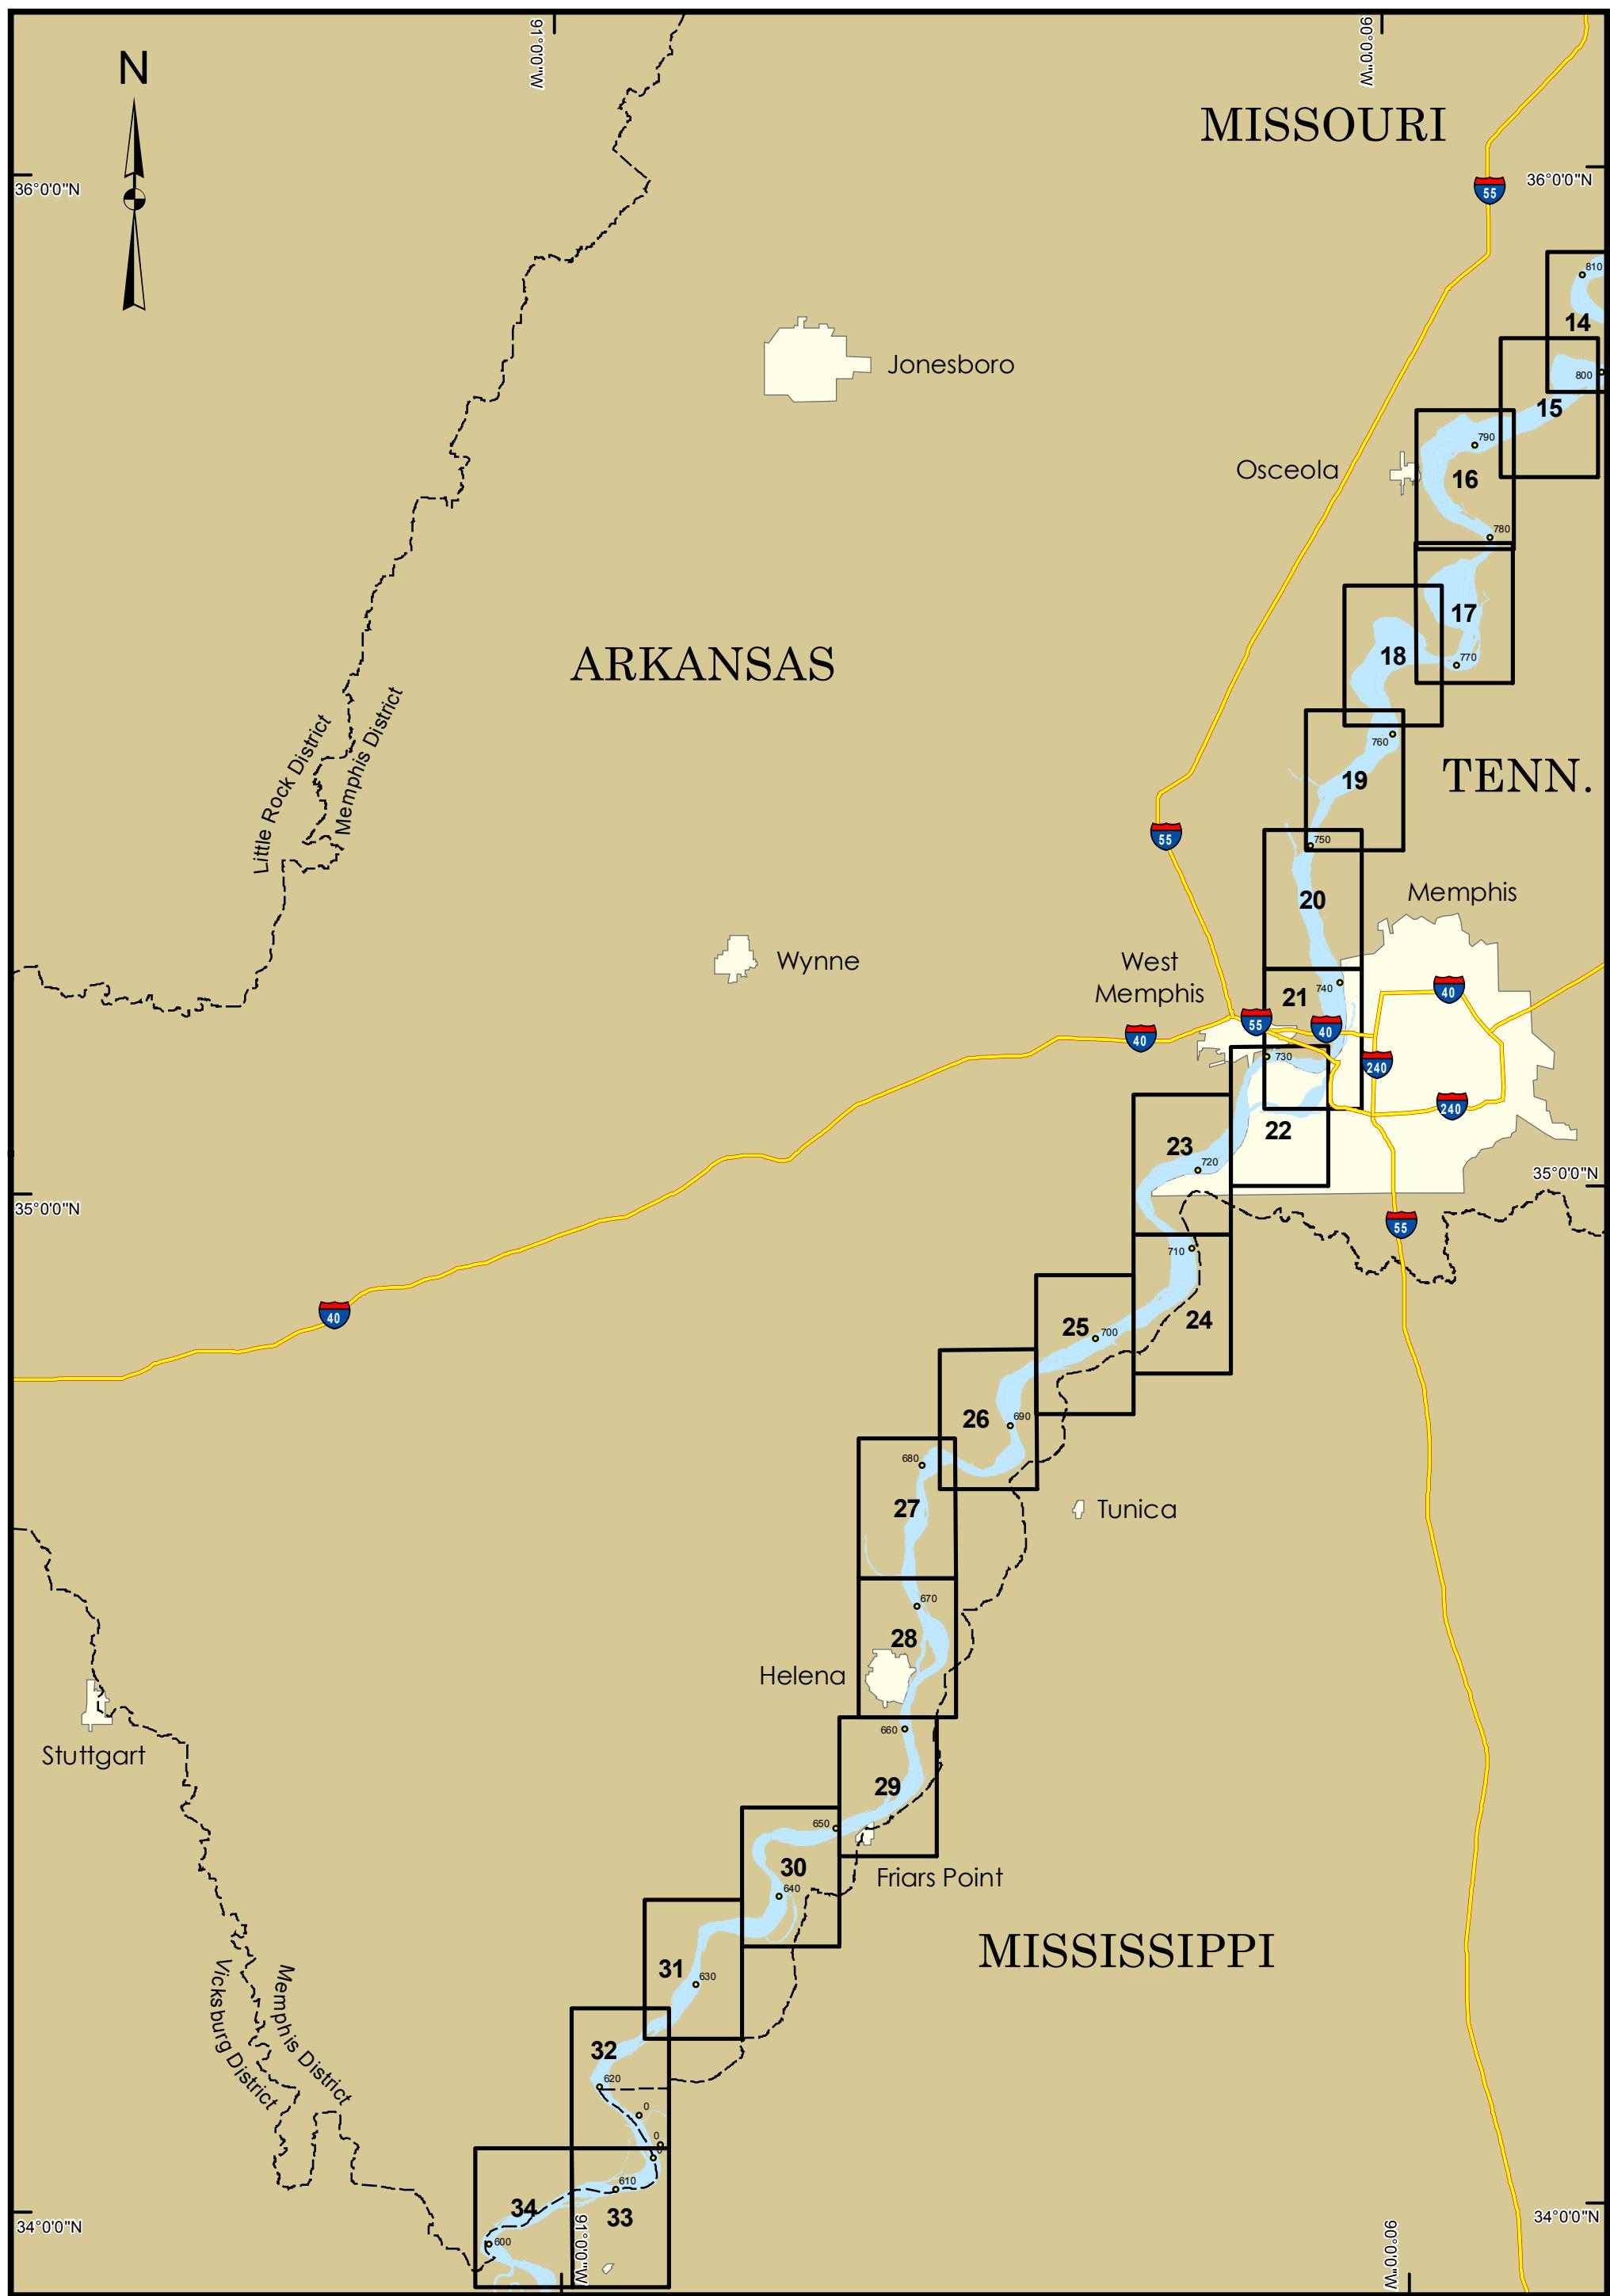

This acquired vessel movement data is primarily for Corps and other government agencies' use. However, summary statistics, which do not disclose movements of individual companies, are also released to private companies and to the general public

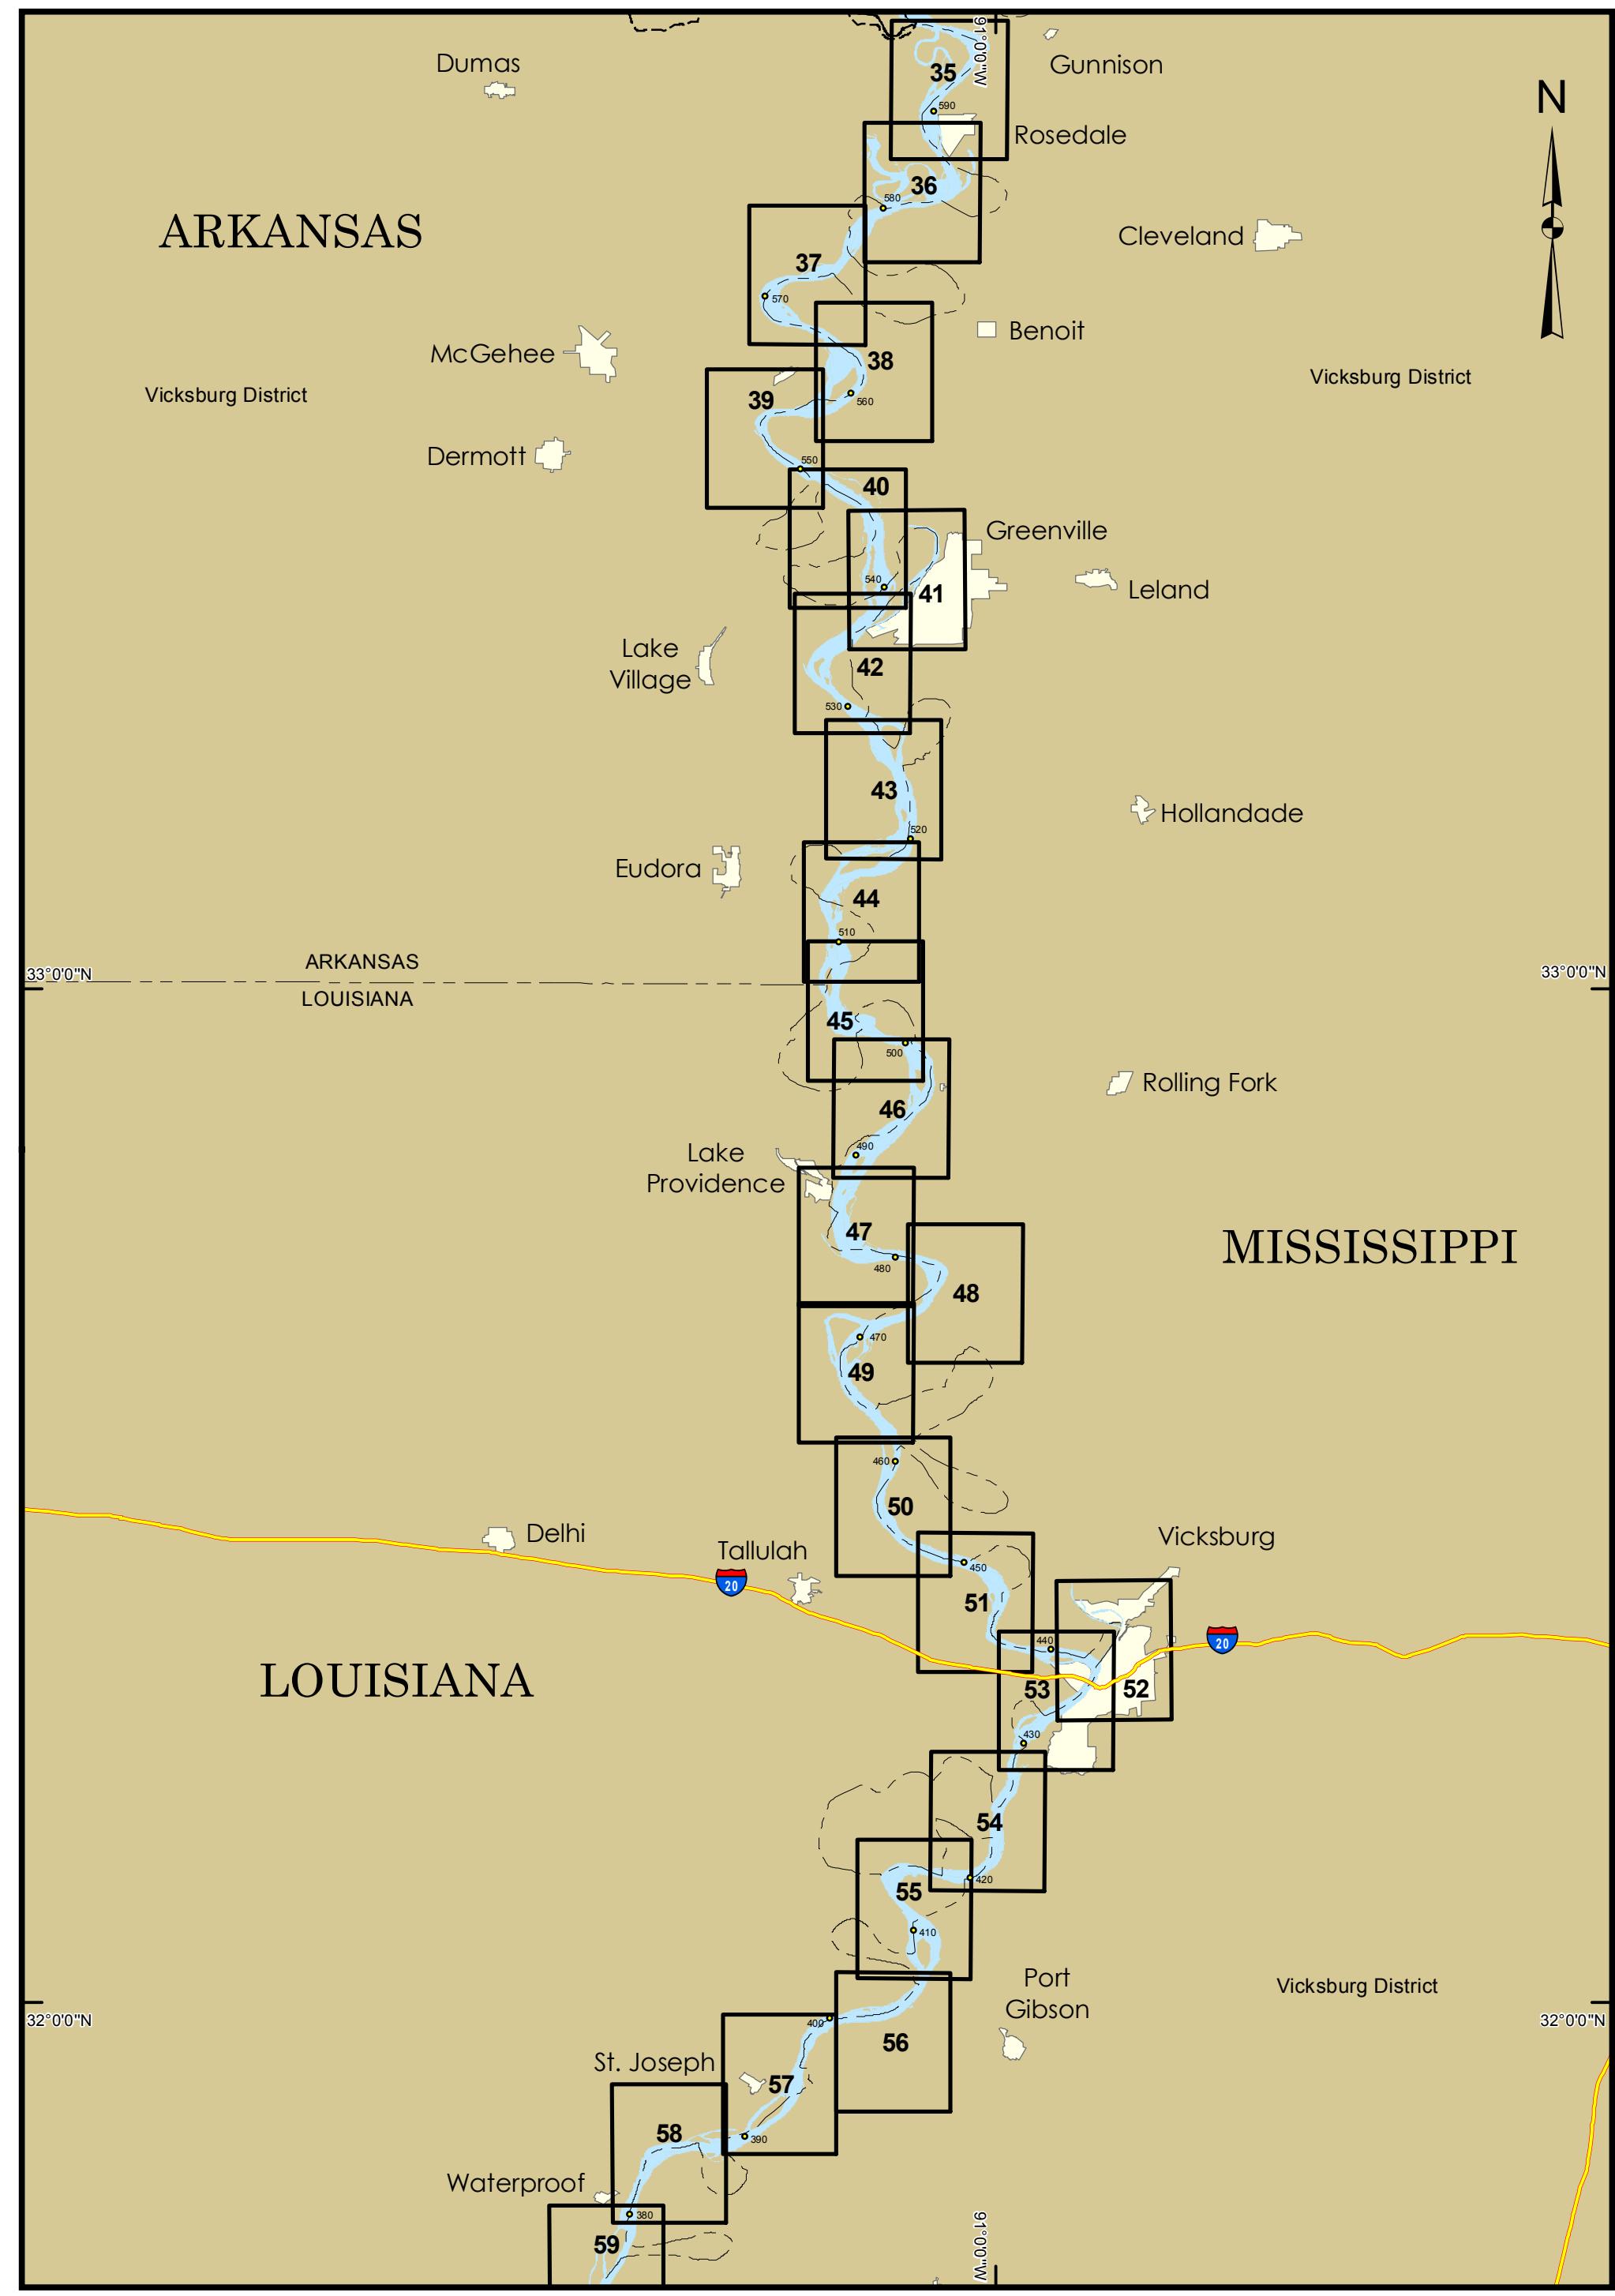

The Waterborne Commerce Statistics Center's summarizes this data in the publication, *Waterborne Commerce of the United States*. It is issued in five parts (one to cover each coast and a national summary). A database that aggregates information of foreign and domestic waterborne cargo movements is available on CD. The publication *Transportation Lines of the United States* contains listings of domestic vessel operators, details their equipment and references their service areas. Most data are available in both hard copy and electronic form. Specialized data processing requests are considered on a case-by-case basis. Products and services may be obtained by request to:

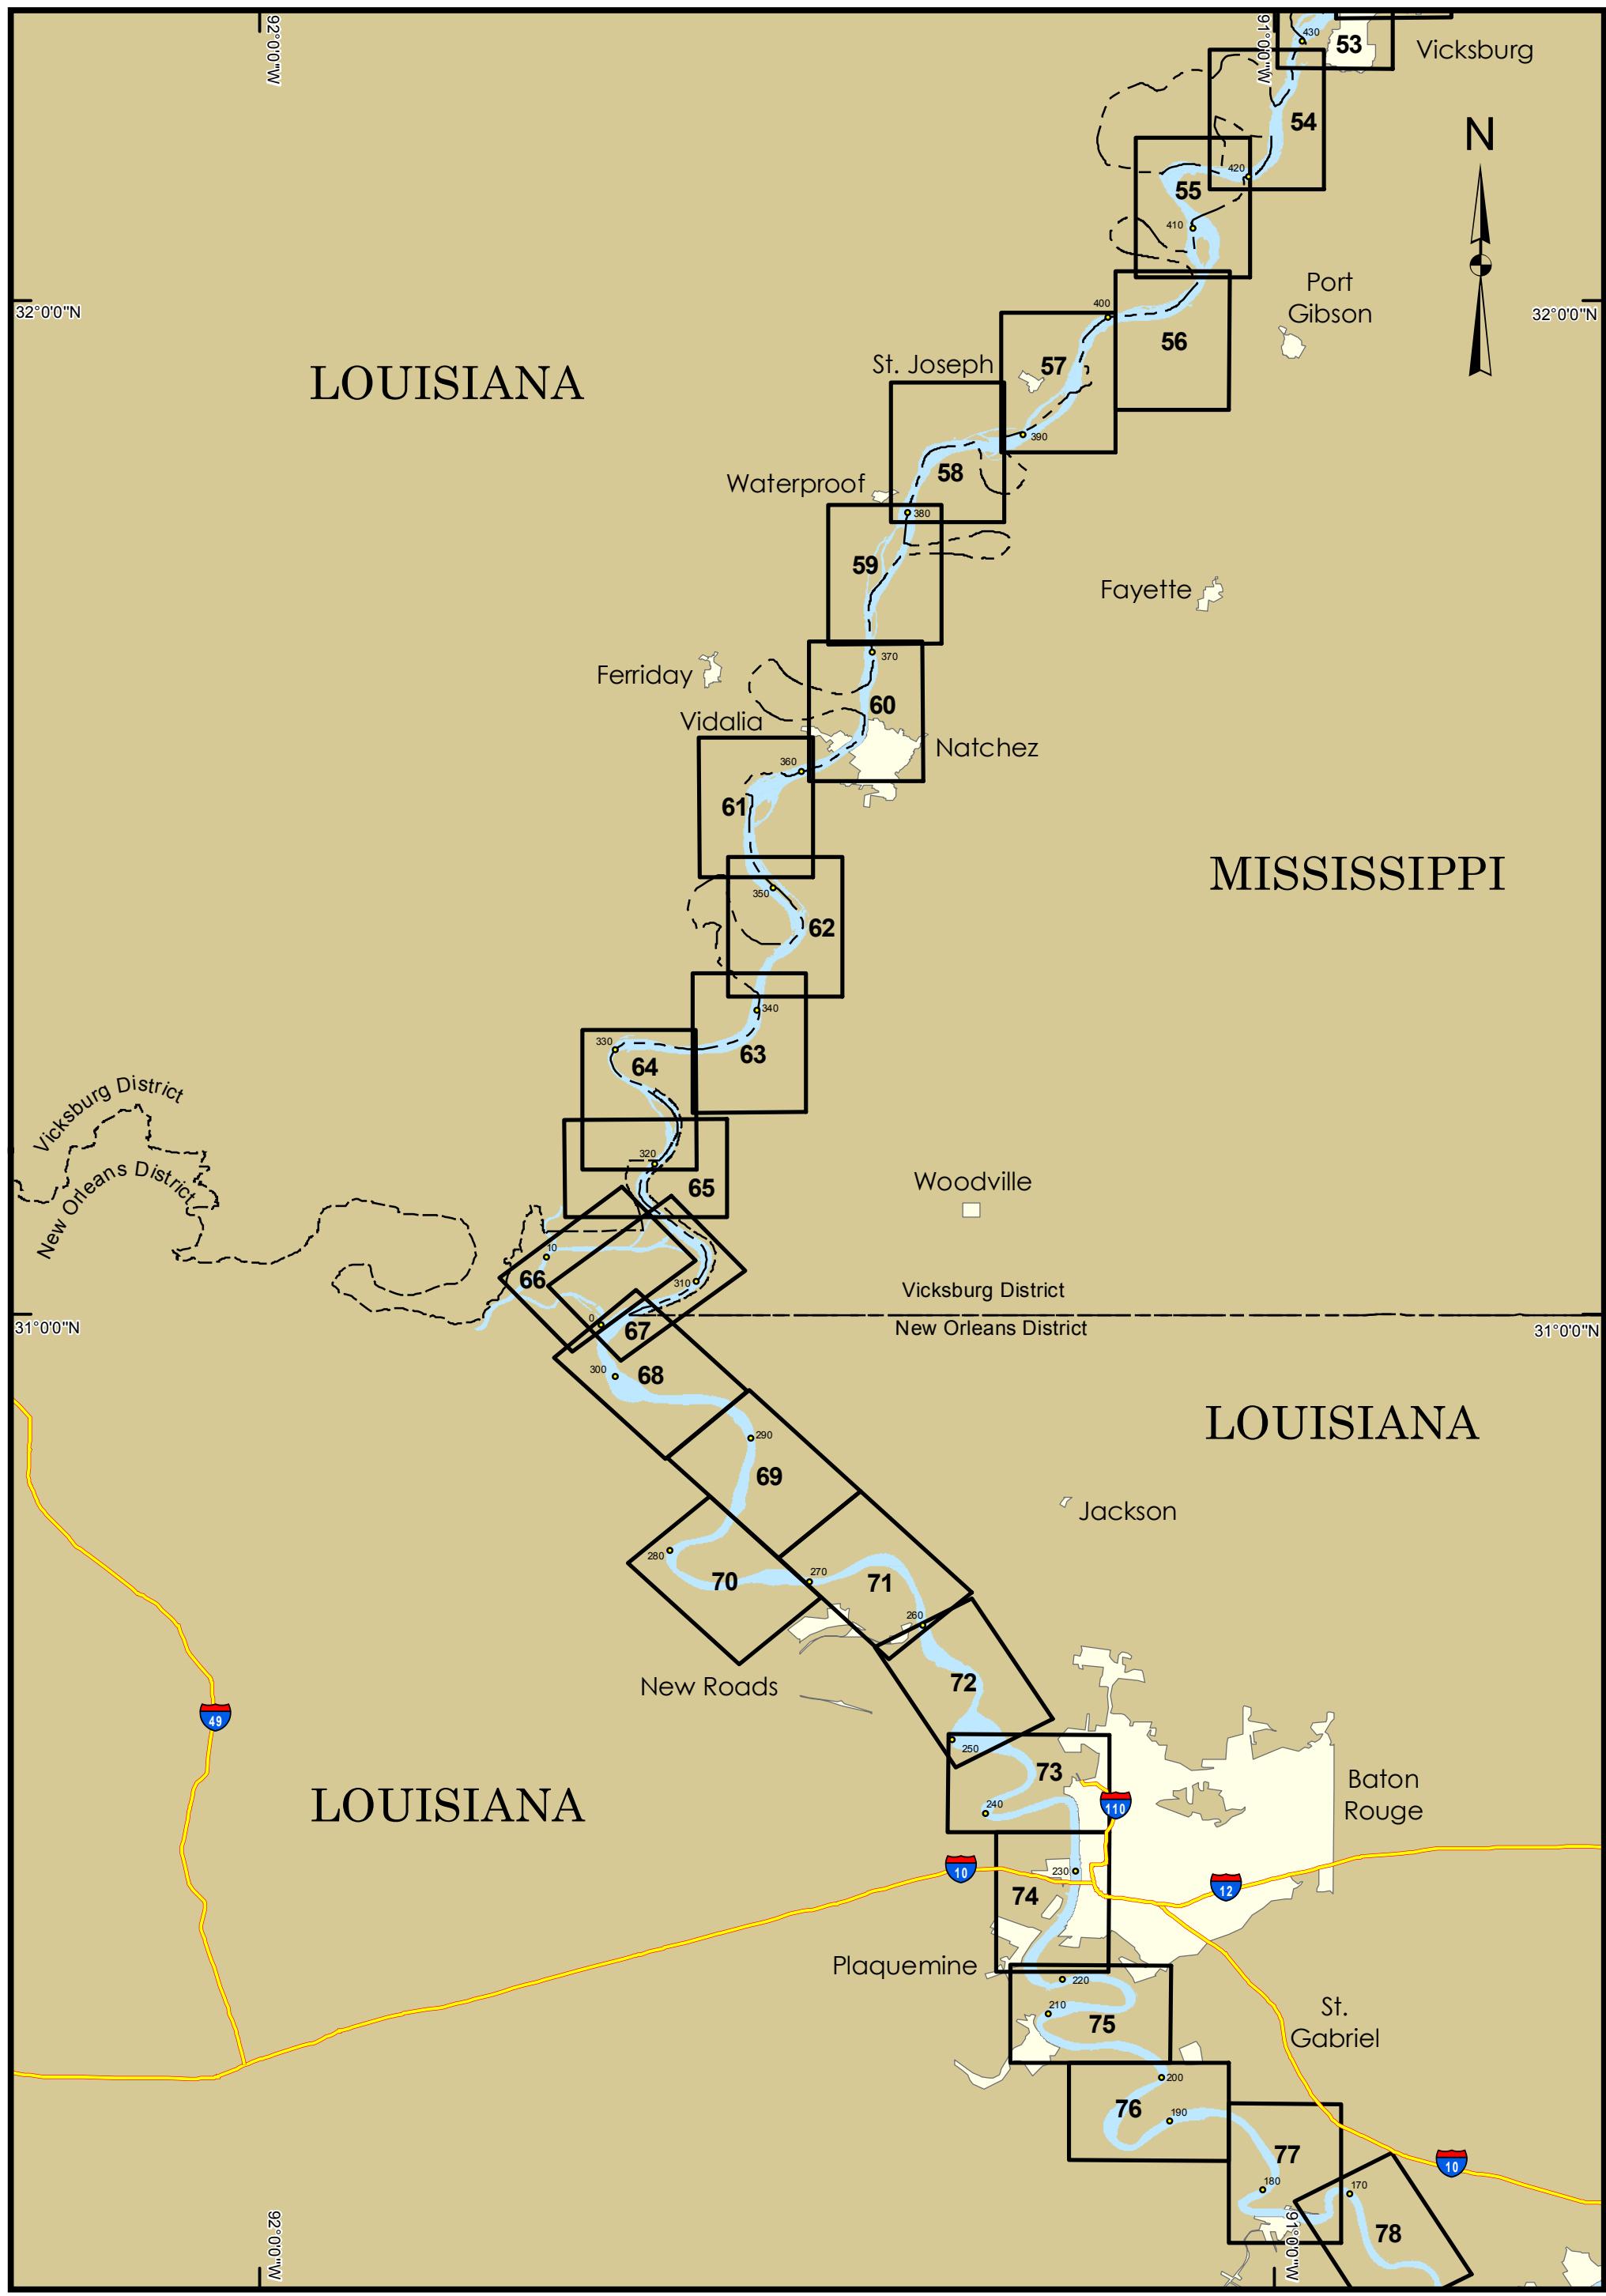

Waterborne Commerce Statistics Center (WCSC)  
P.O. Box 61280  
New Orleans, LA 70161-1280

2015

SCALE = 1:40,000

A scale bar at the bottom of the page indicates distances in both miles and kilometers. The top horizontal line is labeled "2 Miles" at its right end. Below it, another horizontal line is labeled "2 Kilometers" at its right end. Both lines are marked with tick marks at 1, 0.5, 0, and 1 mile/kilometer intervals.

Mileage above and below Head of Passes is based on surveys of 1962.

\* Via Southwest Pass

**NAVIGABLE WATERWAYS**  
**MISSISSIPPI VALLEY DIVISION**

Waterway	Miles of Project Channel	Project Dimensions	Head of Navigation	Remarks
Mississippi River MO, IL, KY, TN, AR, MS, LA	955.8 - 233.4	Cairo - Baton Rouge; 12 ft. deep, 300 ft. wide.		Maintained to 17 feet.
	233.4 - 104.0	Baton Rouge to New Orleans; 45 ft. deep, 500 ft wide.		
	104.0 - 86.7	Port Limits of New Orleans; 45 ft. deep by 750 ft. wide channel within limits of the 35 ft. deep by 1500 ft. wide channel.		
	86.7 - 0	New Orleans to Head of Passes; 45 ft. deep by 750 ft. wide.		
	0 - 14.2 B.H.P.	Head of Passes to Mouth of South Pass, 30 ft. deep by 450 ft. wide, with 30 ft. deep, by 600 ft. wide over bar.		
	0-21.2 B.H.P.	Head of Passes - Mouth of Southwest Pass, 45 ft. deep by 750 ft. wide, with 45 ft. deep by 600 ft. wide over bar.		
Wolf River (Memphis Harbor) TN	0- 3.0	Project (based on modification of previous project as provided in 1958 Flood Control Act) provides for a channel 9 ft. deep at low water from mouth to Mi. 3 with bottom widths of 250 ft. from Keel Ave, (Mi. 1.75) and 200 ft. from Kell Ave. to Mi. 3.		9 feet at low water maintained from harbor mouth to Mi. 3 near North Second Street (closure dam).
St. Francis River AR	0 - 45.0	None	Mouth of Round Pond Cut-off, 45 miles above mouth.	During low water period, depths do not exceed 1 to 2 feet.
White River AR	0 - 169.0	None	Branson, MO - 520 miles above mouth.	Mouth to Peach Orchard Bluff, AR, a navigable depth of more than 4.5 feet for 8 months, and less than 4.5 feet for 4 months.
Arkansas and Verdigris Rivers AR, OK	0- 72.5 (1) 72.5 - 436.6 (2)	Channel widths are generally 300 feet on the White River and Arkansas Post Canal, 250 feet on the Arkansas River and 150 feet on the Verdigris River. The channel has a minimum depth of 9 feet throughout.	Catoosa, OK on the Verdigris River. Mouth of White to entrance to Arkansas and Verdigris Rivers, 386.3 Mi., to Catoosa, OK, 436.6 Mi.	Navigation channel marked by buoys, shore lights and day marks. There are 17 locks, 12 in Arkansas and 5 in Oklahoma. All lock chambers are 110 feet wide by 600 feet long.
Yazoo River	0- 188.1	A 9 ft. depth is presently available about 5 months, with controlling depths of 3 to 4 feet over the bars during low water periods.	Confluence Yalobusha and Tallahatchie Rivers, Mi. 188.1.	A 9-foot minimum depth by 1 SO-foot minimum width channel is authorized from the mouth to Greenwood, MS. Construction of the authorized project has not been initiated.
Big Black River MS	0 - 71.9	None	Illinois Central RR Bridge, Mi 71.9.	Between January and June the depth will exceed 4 ft., remainder of year controlling depth is 1 to 2 ft.
Red River Waterway LA, TX, AR, OK	MS River to Shreveport, LA Reach 0 - 236.0	9' x 200' channel from the Mississippi River to Shreveport, LA and then to Daingerfield, TX via Twelvemile and Big Cypress Bayous.	Shreveport, LA, Post Project Mile 236.0.	Lower 31 Miles of the Overton - Red River Waterway incorporated into this project.
	Shreveport, LA to Daingerfield, TX Reach 236.0 - 294.0		Upper end of Lake 0' The Pines near Daingerfield, TX Mile 294.0.	Shreveport to Daingerfield Reach currently in inactive status.
Ouachita and Black Rivers LA, AR	0 - 337.0	9 ft. deep by 100 ft. wide, channel from the Mouth of the Black River (Mile 0) to Camden, AR (Mile 337.0) (1972 Mileage).	Camden, AR, Mi. 337.0	Lock dimensions - 84 feet wide x 600 feet long.
Atchafalaya River LA (MS River to Morgan	123.0	12 ft. deep and 125 ft. wide from Mississippi River, Mi. 304 AHP to Morgan City, LA.	Connects with Mississippi River, via Old River Lock opposite Angola, LA, (Mi. 304 AHP).	Project completed February 1956 12.0 ft. depth maintained.
(Morgan City to Gulf of Mexico)	33 .5	20 ft. deep and 200 ft. wide from -20 ft contour in Atchafalaya Bay to -20 ft contour in Gulf of Mexico.		The 20 ft. contour in Gulf of Mexico is located 25 miles from mouth of river.
Intracoastal Waterway Gulf Section	302.4 (via Harvey Lock) 303.5 (via Algiers Lock) 64.1 (to Port Allen Lock) 9.0 (to Plaquemine Lock)	Lake Borgne Lt. No. 29 to New Orleans, LA, 12 ft. deep x 150 ft. wide; Harvey Canal, 12 ft. deep x 125 ft. wide; Mississippi River via Algiers Lock (New Orleans, LA), via Houma By-Pass to Lower Atchafalaya River (Morgan City, LA) 16 ft. x 150 ft. wide; Morgan City, LA to Sabine River, 16 ft. x 200 ft. wide.		Plaquemine Lock was permanently closed to navigation on 29 September 1961. Operation of the highway and railroad bridges immediately downstream from the lock was discontinued as of the same date. A channel of interim section (8ft. by 50 ft.) connects with Franklin, LA (5.8 miles). Work has not been initiated on enlarging the existing 12' x 125' channel to 16' x 150' and 16' x 200' between Mississippi River via Algiers Lock (New Orleans, LA) to Sabine River.
Baton Rouge Harbor (Devil's Swamp)	5.0	12 ft. deep and 300 ft. wide.	2.5 Miles above mouth at Mississippi River.	The harbor is completed to Mi 2.5 and maintained to a depth of -12.0 M.L.W. and 150 ft. interim width. The harbor is to be extended to Mi. 5.0 when and as needed.
Waterway from Intracoastal Waterway to Bayou Dulac (Bayous Grand Caillou and Le Carpe) LA	16.3	Bayou Grand Caillou, 5 ft. deep and 40 ft. wide; Bayou Le Cape, 10 ft. deep and 45 ft. wide.	Confluence of Bayou Le Carpe at Gulf Intracoastal Waterway (1.5 miles south-east of Houma, LA).	
Houma Navigation Canal, LA	40.5 with 14.5 miles in Terrebonne Bay	15 ft. deep and 150 ft. wide; Cat Island Pass 18 ft. deep and 300 ft. wide.	Confluence of Houma Navigation Canal and Gulf Intracoastal Waterway (Approx. Mile 59.6, west of Harvey Lock).	

**NAVIGABLE WATERWAYS  
MISSISSIPPI VALLEY DIVISION**

Waterway	Miles of Project Channel	Project Dimensions	Head of Navigation	Remarks
The Inland Waterway (From Franklin to the Mermantau River, LA)	90.0	Depth 5 ft., width 40 ft.		Hanson Canal and Lock, between Bayou Teche and G.I.W.W., donated in fee to St. Mary Parish Police Jury. Other portions of project replaced by G.I.W.W. and Mermantau River, LA Project.
The Inland Waterway (From Vermilion Bay, LA to Mermantau River LA)	47.6	Depth 5 ft., width 40 ft.		
Bayous Petit Anse Tigre and Carlin LA	16.1	Bayou Petit Anse, 9 ft. deep by 80 ft. wide; McIlhenny Canal (Avery Canal), 7 ft. deep by 60 ft. wide; Bayou Carlin, 9 ft. deep by 80 ft. wide. Mooring area 9 ft., deep by 1300 ft. long, width varying from 125 ft. to 200 ft. along right bank of Bayou Carlin below the south edge of Delcombre, LA.	(See remarks)	Bayou Petit Anse at Highway bridge north of Avery Island, LA, 9.1 miles to Vermilion Bay. Mi. 0 is at Intercoastal Waterway; Bayou Carlin at Lake Peigneur 1.5 miles north of Delambre, LA, 7.6 miles to mouth of Bayou Petit Anse. McIlhenny Canal (Avery Canal) at Intracoastal Waterway (Mi. 0) to Vermilion Bay (Mi. 2).
Bayou Tecbe and Vermilion River LA	51.0	Bayou Teche; Mi. 0 to 54.5, Mouth to New Iberia 8 ft. deep, 80 ft. wide; Mi. 54.5 to 72.5, New Iberia to Keystone Lock, 6 ft. deep, 60 ft. wide; Mi. 72.5 to 106.5, Keystone Lock to Arnaudville, 6 ft. deep, 50 ft. wide. Vermilion River: 8 ft. deep and 80 ft. wide from Vermilion Bay to the Intracoastal Waterway; 9 ft. deep and 100 ft. wide from Intracoastal Waterway to Mi. 52.0, Lafayette, LA.		
Mermantau River LA (Above G.I.W.W.)	34.0	9-ft. by 100-ft. channel, junction of Bayous Des Cannes and Nezpique to the Intracoastal Waterway, Gulf Section.	Junction of Bayou Des Cannes and Nezpique, 2.25 miles above Mermantau, LA.	12' x 125' & 200' authorized.
Freshwater Bayou LA	19.85 3.22 Mi. Bar Channel	Channel 112 ft. deep and 125 ft. wide from the Gulf Intracoastal Waterway at mile 161.2 west of Harvey Lock to the 12 foot depth contour in the Gulf of Mexico with increased width to 250 feet in the Gulf approach as may be found advisable; jetties from the shoreline to the 6 foot depth contour in the Gulf of Mexico; and a lock 84 ft. wide and 600 ft. long near the Gulf of Mexico.	Junction with Gulf Intracoastal Waterway (Mi. 161.2 west of Harvey Lock).	Freshwater Bayou Lock opened to navigation 27 July 1968.
Calcasieu River and Pass LA	122.5	Channel 35 ft. deep by 250 ft. wide from vicinity of U. S. Highway 90 to the wharves at Port of Lake Charles. Channel 40 ft. deep by 400 ft. wide from the wharves at Lake Charles to the jettied channel at Gulf of Mexico, including Clooney Island Loop, 40 ft. x 400 ft., and Coon Island Ship Channel 40 ft. x 200 ft. Channel 42 ft. deep by 800 ft. wide from the jettied channel to the 42 ft. depth contour in the Gulf of Mexico.	Phillips Bluff, LA, 85.9 miles to mouth in the Gulf of Mexico.	
Lake Charles Deep Water Channel, LA	24.9	30 ft. deep and 125 ft.	Navigable throughout; Mi. 266.0 (G.I.W.W. mileage) at Sabine River south of Orange, TX.	
Waterway from Empire, LA to the Gulf of Mexico	10	9 ft. deep and 80 ft. wide	Mi. 29.5 A.H.P. (Mississippi River mileage) 10 miles above Gulf of Mexico shore line.	
Grand Bayou Pass, LA	--	6 ft. deep and 60 ft. wide entrance bar Gulf of Mexico.		
Barataria Bay Waterway, LA	43.6	Project authorized by River and Harbor Act July 1958. Provides for a 125 ft. by 12 ft. channel from G.I.W. to Grand Isle, and thru Barataria Pass with extension for 4.3 mi., 12 ft x 250 ft. bar entrance channel from Barataria Pass along N. side of Grand Isle thru B. Rigaud.	Junction of Bayou Villars and Bayou Barataria with the Gulf Intracoastal Waterway (Vic. Mile 115.0)	
Mississippi River Gulf Outlet, LA		36 ft. deep and 500 ft. wide to Chandeleur Islands, thence increasing to 38 ft. deep and 600 ft. to the 38 ft. contour in the Gulf of Mexico.		Modification of the Mississippi River - Baton Rouge to the Gulf of Mexico project provides for a tidewater channel from the Inner Harbor Navigation Canal at New Orleans extending southeast as a land and water cut to and through Chandeleur Sound and Islands to the 38 ft. contour in the Gulf of Mexico.
Mississippi River Outlets, Venice, LA (Tiger Pass)		14-ft. deep 150-ft wide to the jettied channel at the Gulf of Mexico (approximately mile 12.5), thence increasing to 16-ft. deep and 250-ft. wide to the 16-ft. contour in the Gulf of Mexico.	Head at Mississippi River, Mile 10.0 A.H.P. (Mississippi River Mileage).	
Mississippi River Outlets, Venice, LA (Baptiste Collette)		14-ft. deep and 150-ft. wide to the jettied channel at Gulf of Mexico (approximately mile 6.0), thence increasing to 16-ft. deep and 250-ft. wide to the 16-foot contour in the Gulf of Mexico.	Head at Mississippi River Mile 11.5 A.H.P. (Mississippi River Mileage).

# 2015 Flood Control and Navigation Maps

## Mississippi River: Cairo, Illinois to the Gulf of Mexico

### Mile 953 A.H.P. to Mile 22 B.H.P.

The Mississippi River has the third largest river basin in the world. It is the fabled river of Native Americans, Marquette and Joliet, Mark Twain, and steamboat pilots. Man's modern relationship with the Mississippi River began by using the river as the focal point for transportation, commerce, and trade. Favorable locations along the river, such as landings and river confluences, grew into settlements. Settlements grew into towns, which grew into cities including Memphis, Vicksburg, Natchez, Baton Rouge, and New Orleans. Transportation progressed from canoes in the 1700's, to ferries and steamboats into the 1930's, and finally to a major transportation artery connecting the Western Rivers. Today, ocean going vessels reach 240 miles inland to the Port of Baton Rouge, LA.

The Mississippi River Commission (MRC) was established by an Act of Congress on June 28, 1879. Congress charged the MRC with the mission to develop plans to improve the condition of the Mississippi River, foster navigation, promote commerce, and prevent destructive floods. The MRC was charged with prosecuting the comprehensive river management program known as the Mississippi River and Tributaries (MR&T) project, which was authorized through the Flood Control Act of 1928.

The MR&T project is the largest flood control project in the world, providing protection to the 36,000 square-mile lower Mississippi valley. The navigation features of the MR&T project seek to facilitate navigation and promote commerce on the nation's most vital commercial artery. The Corps Mississippi River & Tributaries (MR&T) project has developed a river channel with the dimensions and alignments that carry floodwater flows efficiently and are also suitable for navigation. Waterborne commerce on the Mississippi River increased from 30 million tons in 1940 to nearly 500 million tons today.

This MR&T-funded publication of the **2015 Flood Control and Navigation Maps of the Mississippi River** represents its 63rd Edition. This product is also supported by USACE Inland Electronic Navigational Charting program. It also represents a transition to more routine incremental updating with publication and distribution supported by Print-on-Demand (POD) services.
